Objective:

Dedicated Web/Software Developer with full-stack knowledge committed to problem solving and creating solutions in the least amount of time while maintaining thoroughness and thoughtfulness. Driven individual looking to bring my skills, knowledge, and enthusiasm for software development to a strong organization that values employee growth, continual learning, and professional advancement.

Education & Training:

- **Software Development, Upright Education, 2022**
 - 480 hours of curriculum and coding focused on testing and deploying software applications using JavaScript on the client and server side of applications. Studied complex programming concepts solidified through challenges such as pair programming, weekly projects, lab exercise, and code reviews
- **HubSpot CMS for Developers Certification - exp completion: April, 2022**

Technical Skills & Competencies:

Technical Skills: JavaScript, React, HTML, CSS, Git, MongoDB, Express, Node.js, REST APIs, AJAX

Competencies: Time management & prioritization, self-motivator, problem-solving, working with clients, effective communication, collaboration, teamwork, creativity, organization, adaptability, quick learning ability and drive to do so.

Technical Projects:

- **React Portfolio** (<https://github.com/Sadie802/guess-the-number-Sadie802>)
 - Portfolio built using React and different libraries including Reactstrap and Bootstrap.
 - Showcases my ability, efficiency, and aptitude for front end development.
 - Strengthened my design and structure skills, and advanced my ability to use new technologies and learn on the spot.
- **React Chat** (<https://github.com/burlingtoncodeacademy-students/react-chat-sadie-dave>)
 - Worked with a teammate to produce a full stack application.
 - This application utilizes an Express server, MongoDB, and React.
 - Dynamically rendered components based on URL parameters.
 - Challenged my technical skills by working with both front and back end.
 - Challenged my independent thinking by working with another individual. My teammate and I quickly rose to challenge by generating effective communication, collaboration, and idea sharing.
- **Guess The Number** (<https://github.com/Sadie802/guess-the-number-Sadie802>)
 - This project is an example of a binary search algorithm.
 - Composed entirely out of JavaScript. T
 - Has two instances of the Guess The Number game: one where the computer guesses a users number, and one where the user guesses the computers number.
 - Uses conditional logic to check the user input against the stored values in the application, and adjusts maximum and minimum numbers based on computers guess and user input.

Professional Experience:

Customer Service Representative/Tech Assistant, Onion River Animal Hospital, Berlin, VT

August 2018-December 2021

- First point of contact for clients, created new hire training material/processes, managed and updated patient and client database, assisted clients with various levels of need, triaged emergencies.
